

INITIALIZE AMPLIFY PROJECT

Now that the React project is created, initialize a new **AWS Amplify** project.

```
amplify init
```

It will prompt you with a few questions. Answer the questions accordingly as reported in the following image.

```
Plugin scan successful
Note: It is recommended to run this command from the root of
? Enter a name for the project sumerian-amplify-app
? Enter a name for the environment dev
? Choose your default editor: Sublime Text
? Choose the type of app that you're building javascript
Please tell us about your project
? What javascript framework are you using react
? Source Directory Path: src
? Distribution Directory Path: build
? Build Command: npm run-script build
? Start Command: npm run-script start
Using default provider awscloudformation
