

ADD MESSAGE TO MACHINE STATE

- Add another state. Rename it **listen for VideoAutoplayBlocked**. Search for and add a **Listen** action.
- Type **VideoAutoplayBlocked** into the **Message channel** field.

The screenshot shows the 'Selected State' configuration in the AWS Step Functions console. The state is named 'listen for VideoAutoplayBlocked'. The action is 'Listen'. The message channel is 'VideoAutoplayBlocked'. Below the configuration, there are buttons for 'Set As Initial State', 'Add Action', 'Remove', and 'Toggle State Machine'.
