

APPENDIX

Congratulations

You have created an AI Powered web **and** mobile application using AWS Amplify:

- Created a web application using React JS
- Configured AWS Amplify with authentication, data, and analytics
- Used AWS Amplify to add intelligent features: chatbots, language sentiments, and recommendations
- Added Pinpoint Analytics to our application
- Hosted our application on a public endpoint
- Used React Native to create a native mobile application using the same AWS Amplify services we previously configured

Additional Information

- Clean up your AWS Environment
- Troubleshooting
