

TROUBLESHOOTING

Troubleshooting

Oops - No Application seems to be running here!

You receive this error when trying to preview the application:

AWS Cloud9 can't get you to your requested environment. Here are some suggestions on how to figure out what's going on:

- Check that you have access to <u>your environment</u> and are signed into AWS Cloud9 for the environment.
- Check that the server is successfully running on AWS Cloud9:
 - If the server hit an error, the output window will have a message telling you what it is.

If you get this error, it means the web server is not started. Run **npm start** in a terminal window.
